Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Smithers (US patent 3,088,155).

The patent to Smithers discloses the invention as is claimed, including a wiper blade having an elongated tiltable rubber (12), a pair of backing plates (14), a pair of holding levers (4,6) that hold the rubber and the plates and a cover (10) that includes front and rear inclined surface walls which are connected to form a cap-shaped body. The surface walls are tilted to form a fin. The cover receives the holding levers and directly engages peripheral edges of the backing plates. The cover also includes holding grooves (24) for the plates. A connecting clip (2) is connected to a wiper arm (7) and is connected to the holding lever (4). Connecting clip (2) is at least partially covered on a lateral surface by the cover.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smithers (US patent 3,088,155).

The patent to Smithers discloses all of the above recited subject matter with the exception of a particular hardness for the cover.

While Smithers does not disclose a particular hardness for the cover, it appears such would be optimally discovered during routine experimentation. Smithers discloses that an appropriate hardness would be selected for the cover (col.2, lines 15+). To discover the optimal hardness does not appear inventive but merely that which is contemplated by Smithers. It would have been obvious to one of skill in the art to discover the optimum hardness for the material of the cover,

including as claimed, by routine experimentation, lacking some criticality of such hardness. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum range.

Allowable Subject Matter

Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
